Complains of the following:

Swelling - behind ear left.

History of Development of Present Condition:

Patient had a discharge from left ear one week ago. This discharge & 3 days before admission a swelling appeared behind left ear. It was tender & painful & gradually grew larger. A simple incision was made and abundant pus released. Wound healed rapidly & a good recovery made.

Family History:

Previous Health:

Previous Admissions:

Diagnosis for Indexing:

Maxillary abscess.

Operation or Treatment:

Simple mastoid

Complains of the following:

Facial discharge - neuralgic pain in cheek left

History of Development of Present Condition:

Trouble began in May 1916 - pain in rt. cheek and nasal discharge left.

Was first washed out in Hospital in Aug. 1917. Operated on in April 1917 when abscess drainage was done.

In June 1917 abscess was again opened. In Aug '17 Col. Barrett/Canterbury sent him to hospital. In Dec 13 '17. Med. Board advised return to Canada. This recommendation went thro' Col. McKee.

DATE

On adm. patient had been
 suffering from an ac. ot. med. for
 3 days & left drum reddened & swollen
 on following day worse, bulging &
 painful. Dr. White did a Graham's
 Hughes chloroform anesthesia.

During the following 4 days
 ear dis. changed but the Mastoiditis
 developed with pain & tenderness
 over left mastoid.

At operation pus was found
 in Mastoid cells, under pressure
 Mastoid cell cleaned out, tip of
 amputated.

Wound packed.

Patient made an uneventful
 recovery.

Complains of the following;

Obstructed nasal breathing, frequent nose bleed.

History of Development of Present Condition:

A yr. ago patient had an angioma removed by Dr. Garrow from left buccal cheek. Growth was extensive involving left nostril & right nostril & naso-pharynx.

At operation patient bled profusely & left ex-carotid was tied.

Present adm. idea of removing growth.

Shortly after adm. developed this illness.

and on Mar. 11th had to have rt. ex-carotid tied.

Family History: *inhabit of several severe hemorrhages from nose & throat. (2 hemorrhages 30 3 each) Because weakened & since has*

Previous Health: *been gradually sinking up to.*

(After ligation of rt. carotid patient had one severe hemorrhage 24 3 & frequent vomiting.)

Previous Admissions: *An abscess developed at site of incision for ligation which had to be drained and put under chain on patient's body & cond. was*

Diagnosis for Indexing:

*Angio-fibroma naso-pharynx
& left nostril & right nostril*

Detailed Diagnosis:

Operation or Treatment:

*Ligation of rt. carotid
indicative*

Treatment & Diary:

X-ray showed involvement of left subman-
dibular-pharynx, & tissues of left side of
st. cheek.

The mass had obstructed left nostril &
and could easily be seen pulsating.
The mass could also be readily seen
on exam'n of the post. wall.

On discharge phys. cond. good & improving.
No operative measures had been undertaken
except ligation of lt. Ex. carotid.

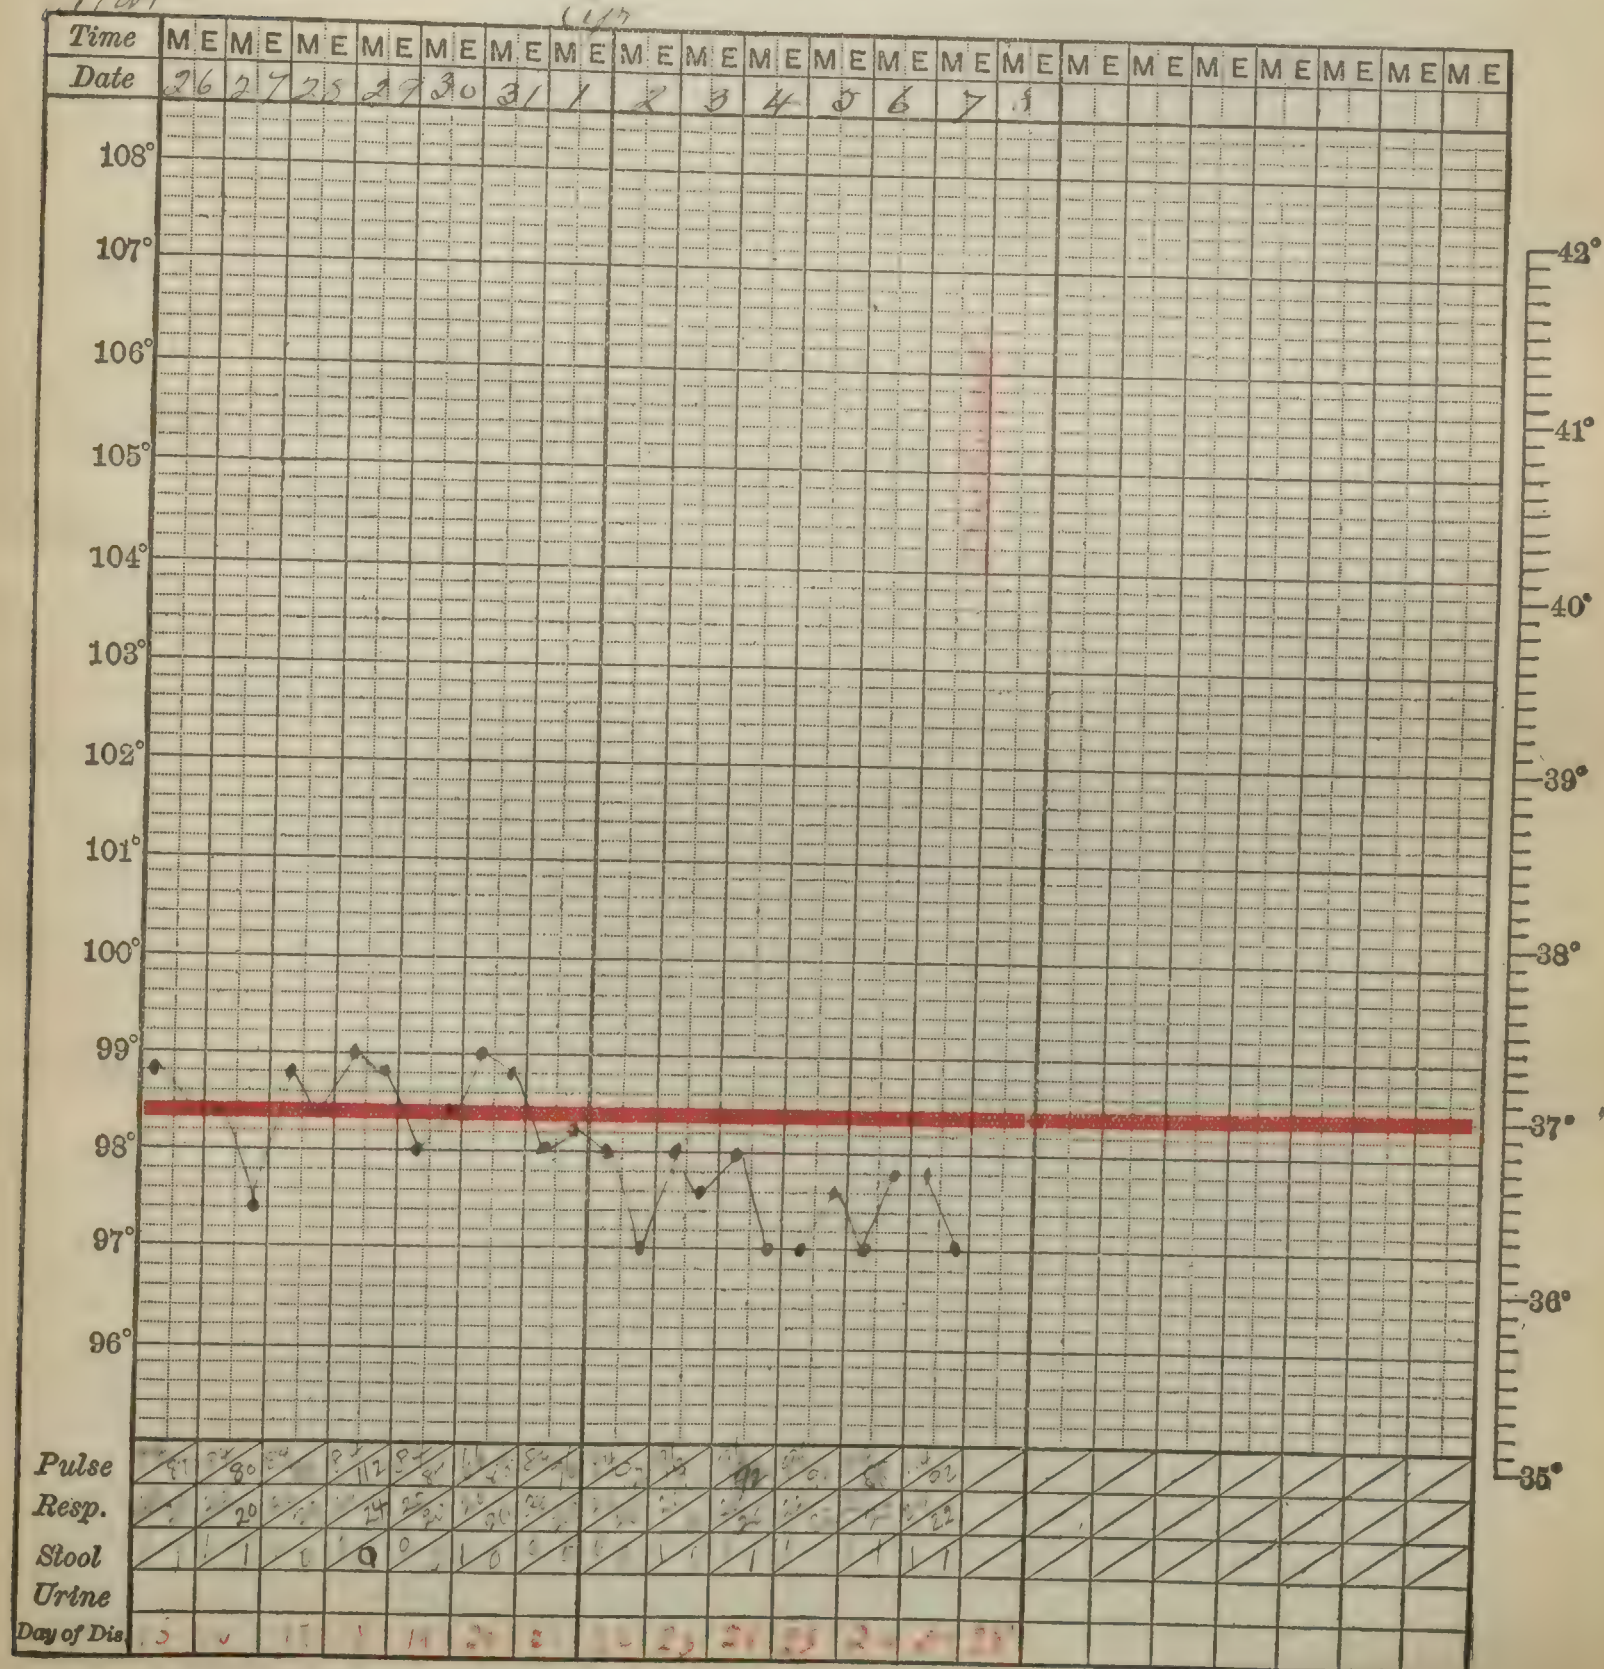

At present both ex. Carotids are tied one (lt)
during this adm. & left ex. Carotid. a yr ago.

W.A. Adams,
Pensions Advocate,
Department of Pensions and National Health,
Westminster Hospital,
London, Ontario.

Re: E. Gibson, #63373.

Dear Mr. Adams,

In reply to your letter of April 29th, I beg to advise that our records show that a Mr. Ernest Gibson of 130a - 10th Ave., Lachine was operated on in this Hospital on March 6th, 1918 at which time a turbinotomy was performed.

This record is extremely brief and contains no other information regarding the patient.

Yours sincerely,

CJT/MG

CANADA

The Medical Superintendent,
Victoria Hospital,
Montreal, Quebec.

Dear Sir:

RE: #63373, H. S. S.,
1511 ERIE ST., TORONTO, ONT.

The marginally noted ex-service man has made application to this Department for pension in respect of:-

"Diphtheria" and nasal obstruction

He states that he had an operation on his nose in your institution in the summer of 1917. He is unable to give a more definite date and does not now remember the name of the doctor who attended him. It would be greatly appreciated, if you would ascertain from your records and forward us any particulars you may have of the operation and treatment to which the applicant refers.

If you will do this, it will assist us in deciding whether the man is entitled to pension or not.

Yours truly,

(Signature)
W. A. Adams,
Pensions Advocate.

The chart is a medical template for recording vital signs over a 14-day period. It consists of a grid with a vertical axis for temperature (96° to 108°) and a horizontal axis for time (Date and Time). A red line is drawn across the grid at the 98° mark. The bottom section of the chart is labeled 'Pulse', 'Resp.', 'Stool', 'Urine', and 'Day of Dis'.

Name (in full) Georgioua Leyris

Address 544 Terri

Occupation Home

Age 54

Single, Married, Widowed

Birthplace Canada

Religion P.C.

In service Dr. White

Recommended by C.D.

Complains of the following:

Deafness, chronic discharge & pain in left ear.

History of Development of Present Condition:

Left ear has been discharging for year.
Has recurrent attacks of pain & tenderness.
in mastoid area.
At operation mastoid bone was thick & brittle -
Sept. contained pus under pressure.
Aradile opened, was done. Gargly & packed
thru canal & incision submitted.
Pain made good motion. Results excellent.

In service Dr. White.

Recommended by Dr. White.

Complaints of the following:

Pain tenderness rt. ear & in rt. mastoid region.

History of Development of Present Condition:

In Sept. 1910 patient had a Rad. Mastoid done on rt. side, at that time pus & cholesteatoma were found. The Dura was opened & pus found; the sinus was opened but there was no thrombosis.

Ref. Case no. 2776 — Hosp. No. 47502 —

Diag. — Ac. Mastoiditis G. Chr. Supp. of Med. & Cerebellar Abscess.

Treatment & Diary:

the front of it.

Ext. Aud. Can. practically obliterated
Mastoid region tender & inflamed,
redness & edematous.

A Bad. mastoid was performed
and Cavities artificially made
at previous operation were packed
with Cholesteatoma.

Large Plaster flaps were made
gave extensive room for drainage
and leaving the cavity very retentive.
The Cholesteatoma matting was not
wholly dislodged & the ear
quickly dried & epithelium rapidly
lined the cavity.

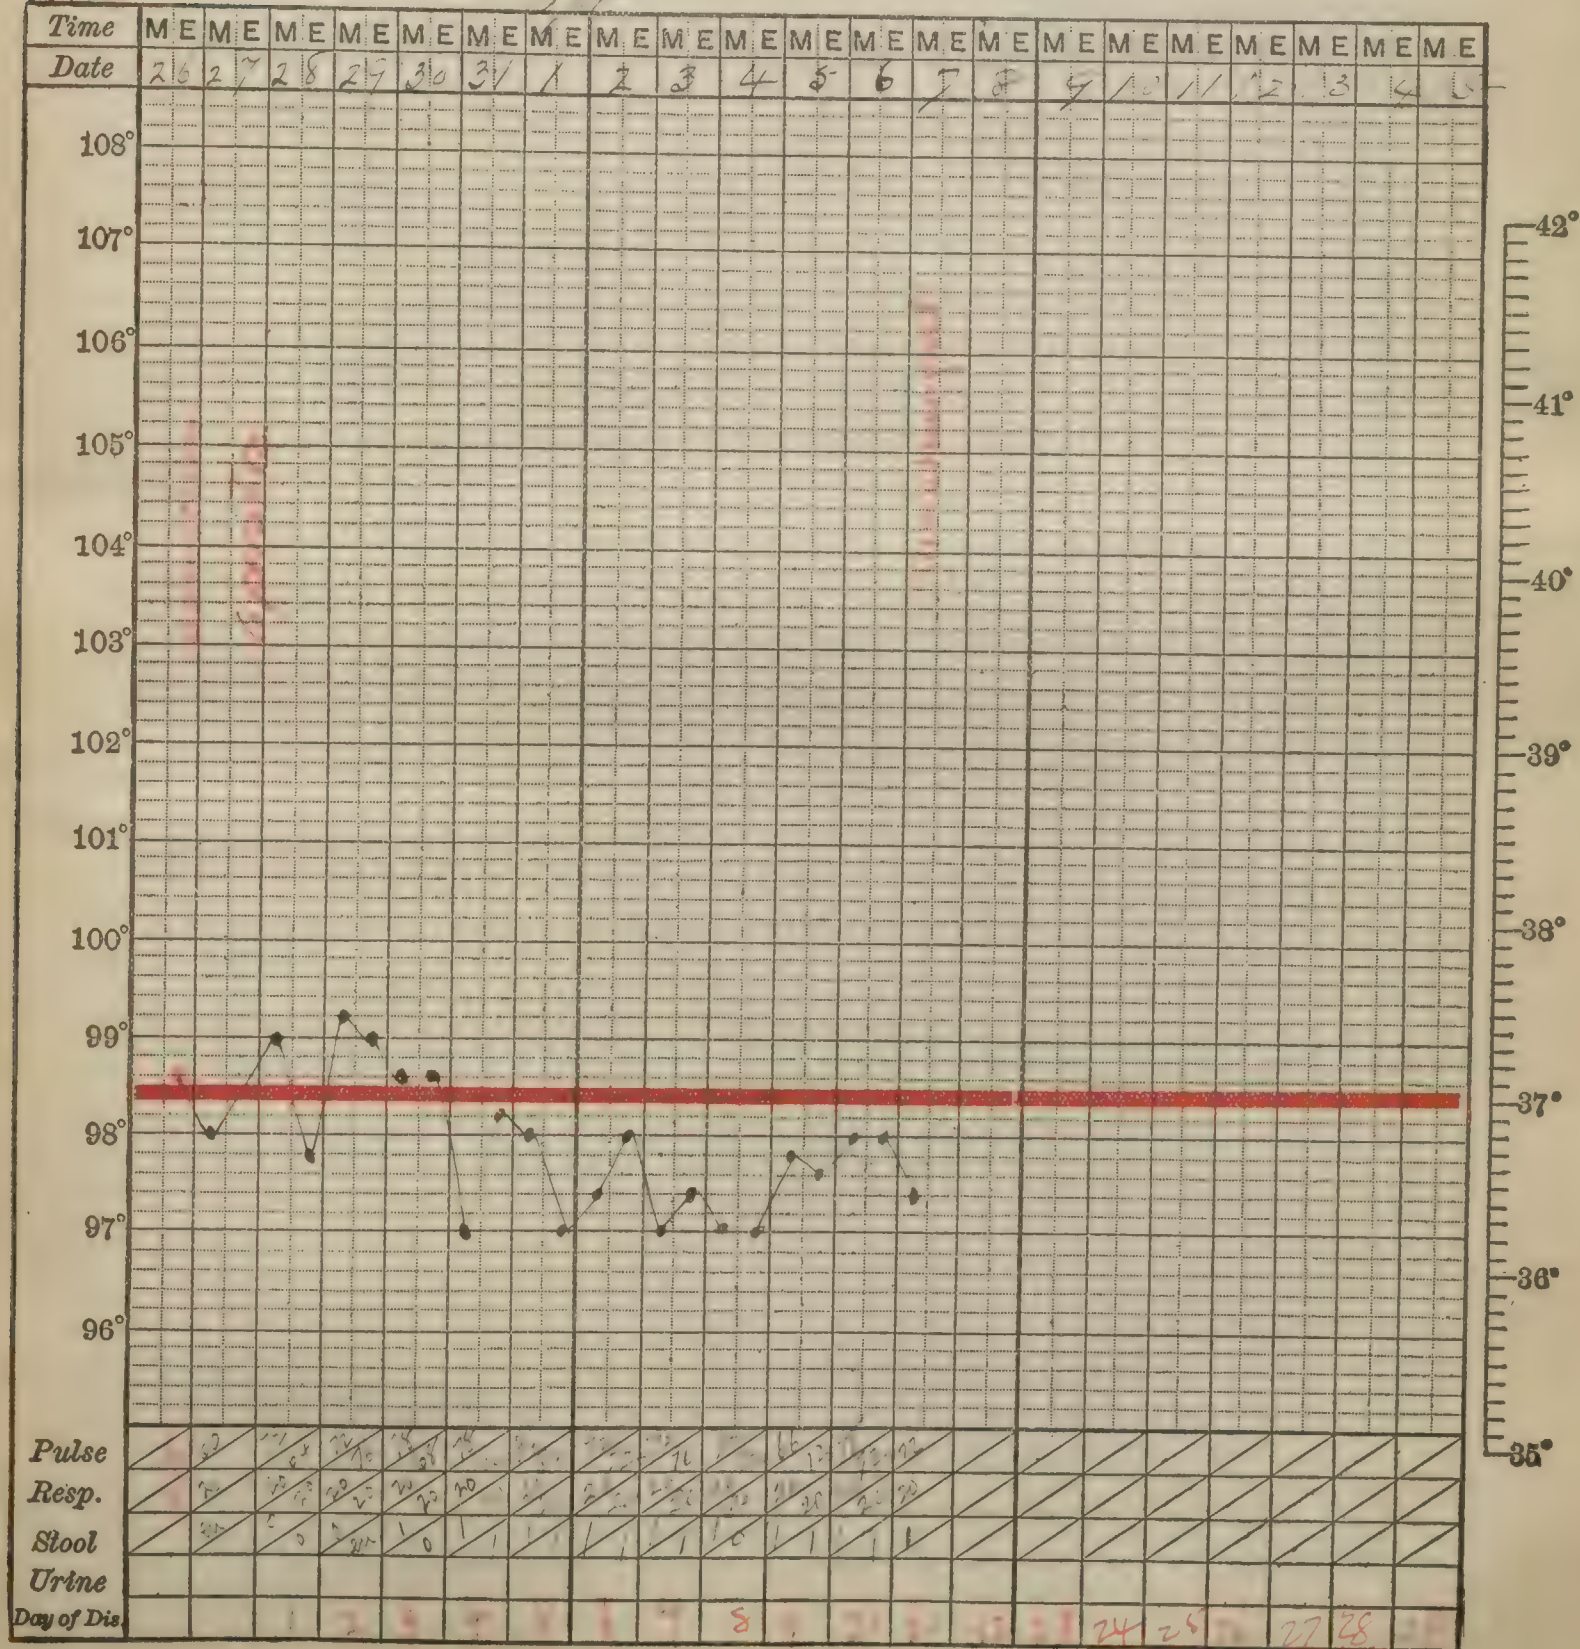

Eleven days after operation
he left Hospital ear practically
dry. Result excellent.
